

# Flusso su una Rete

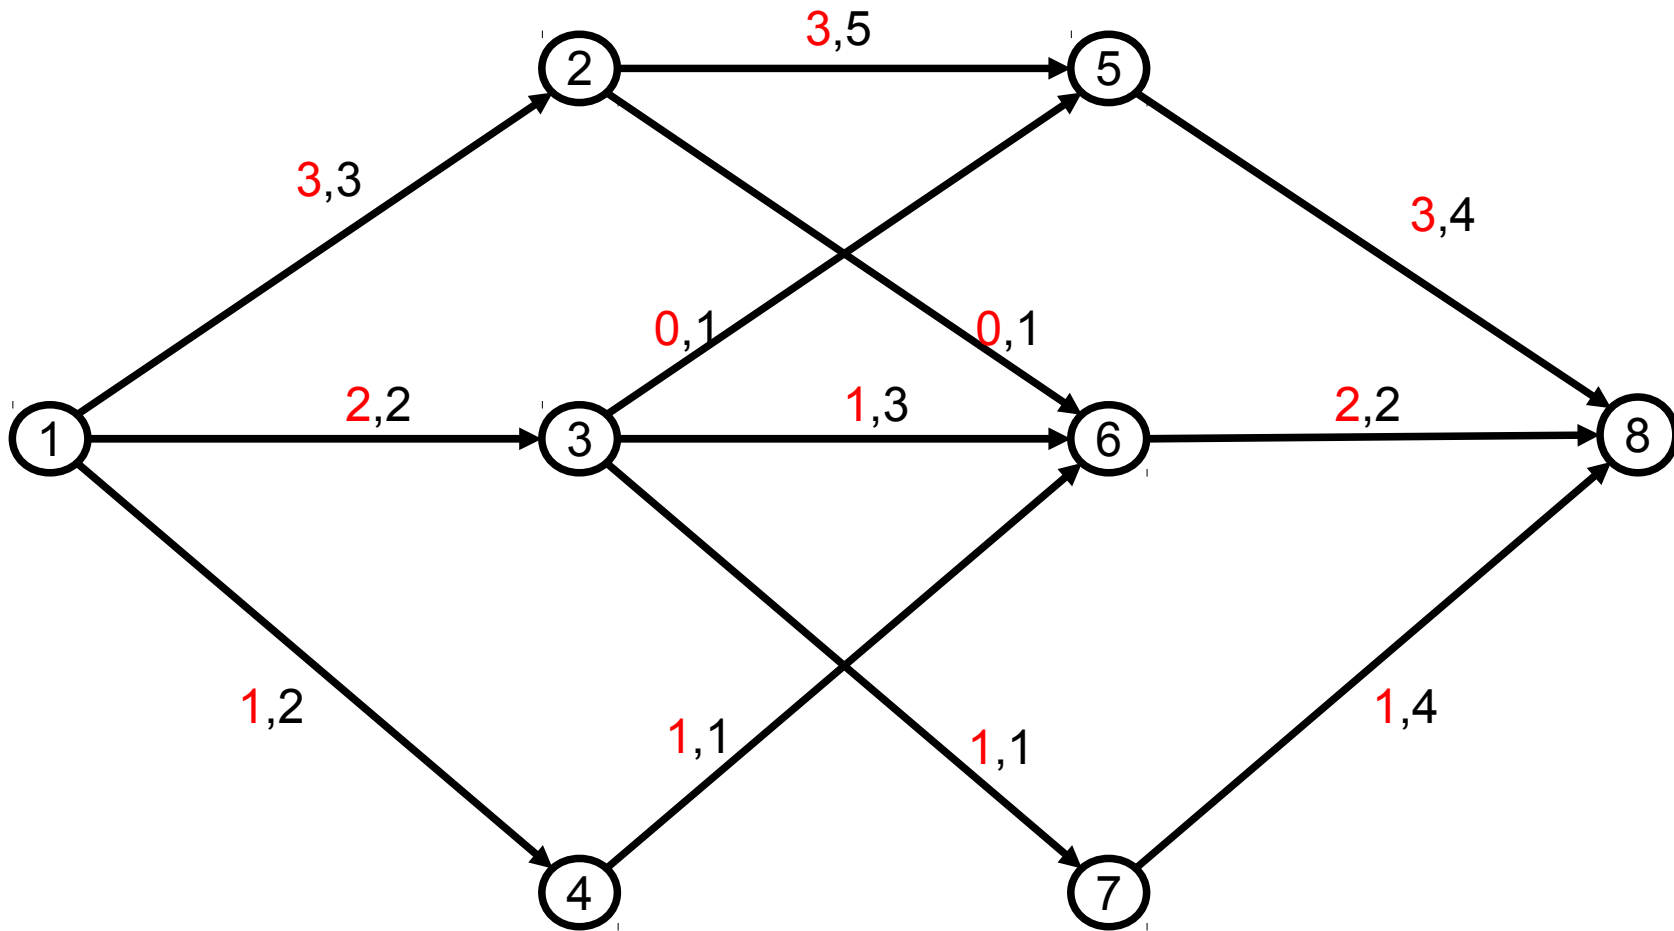

# Un cammino orientato aumentante

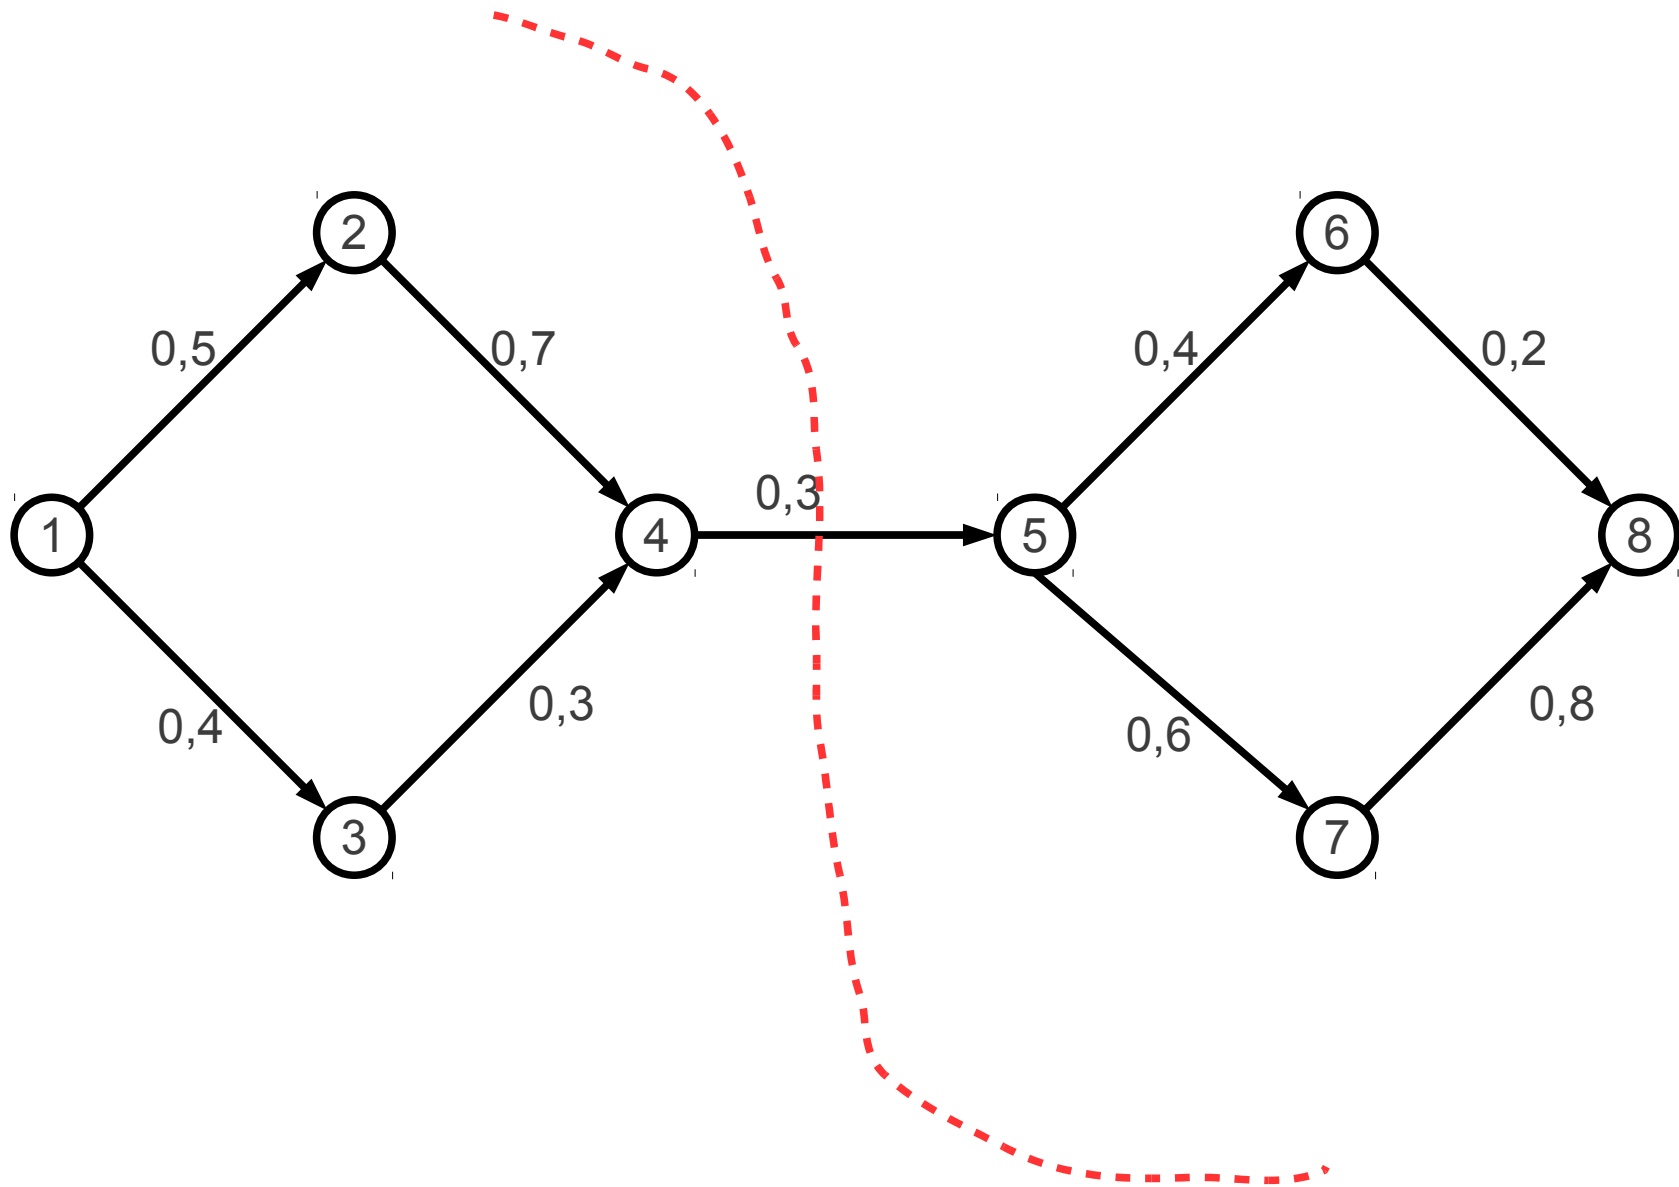

# Un cammino non orientato aumentante

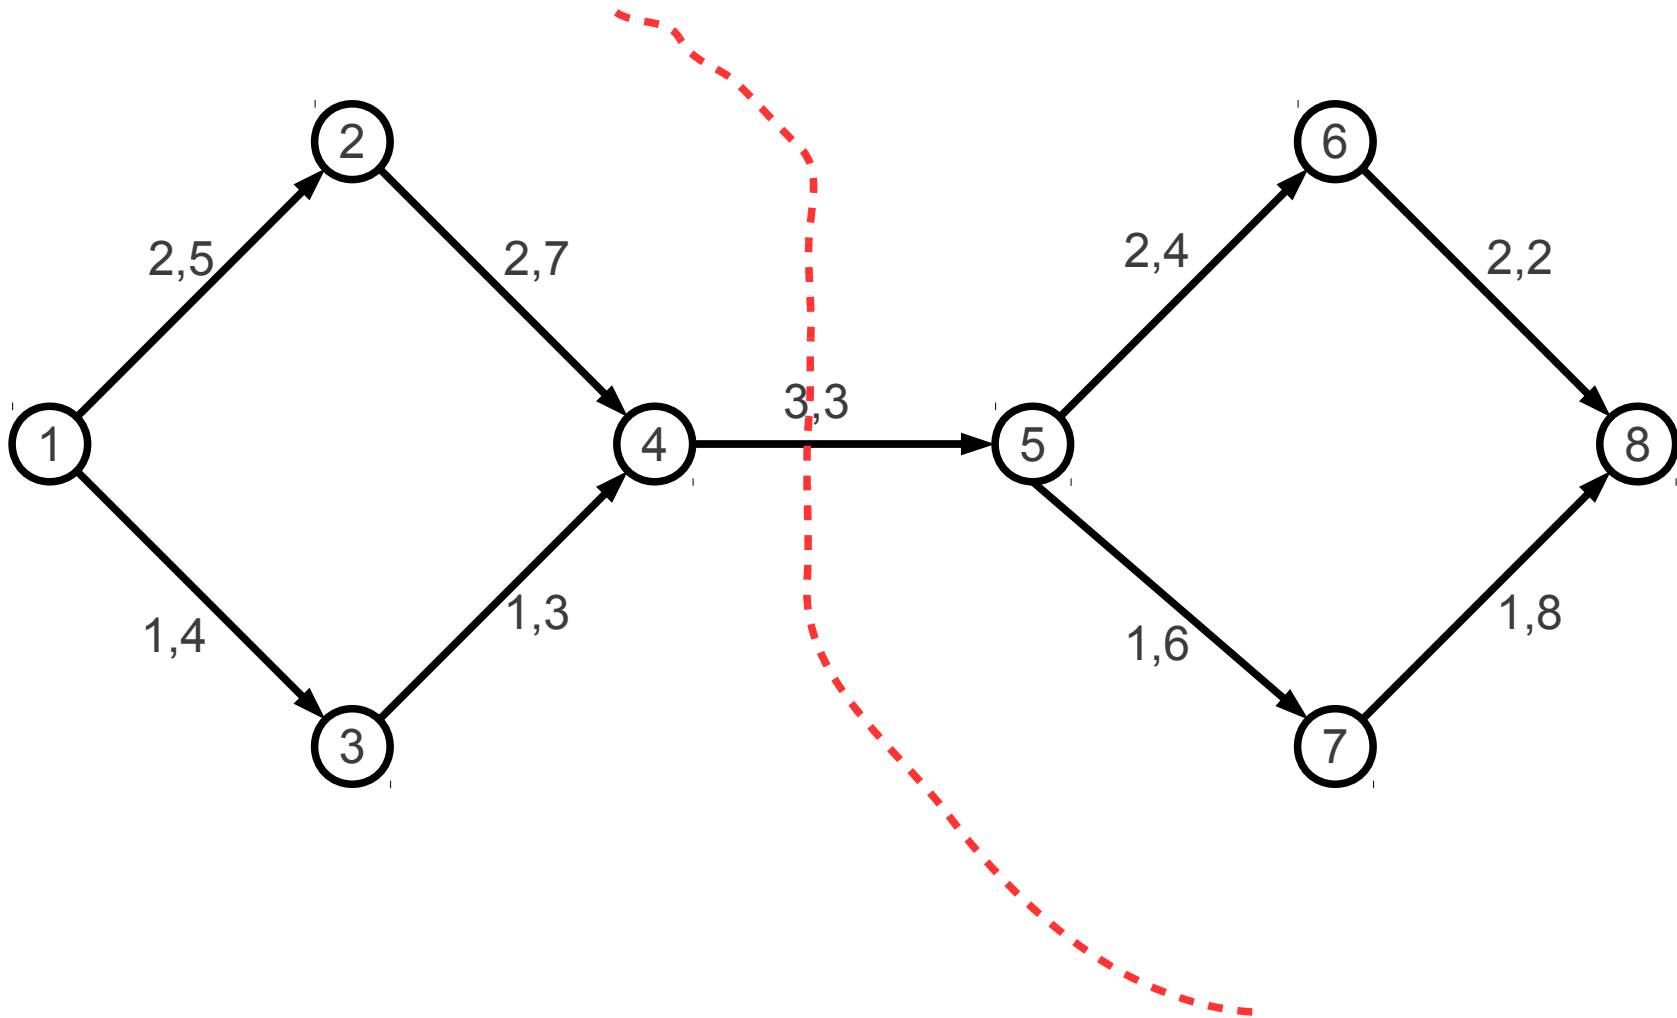

Non possiamo più aumentare il flusso

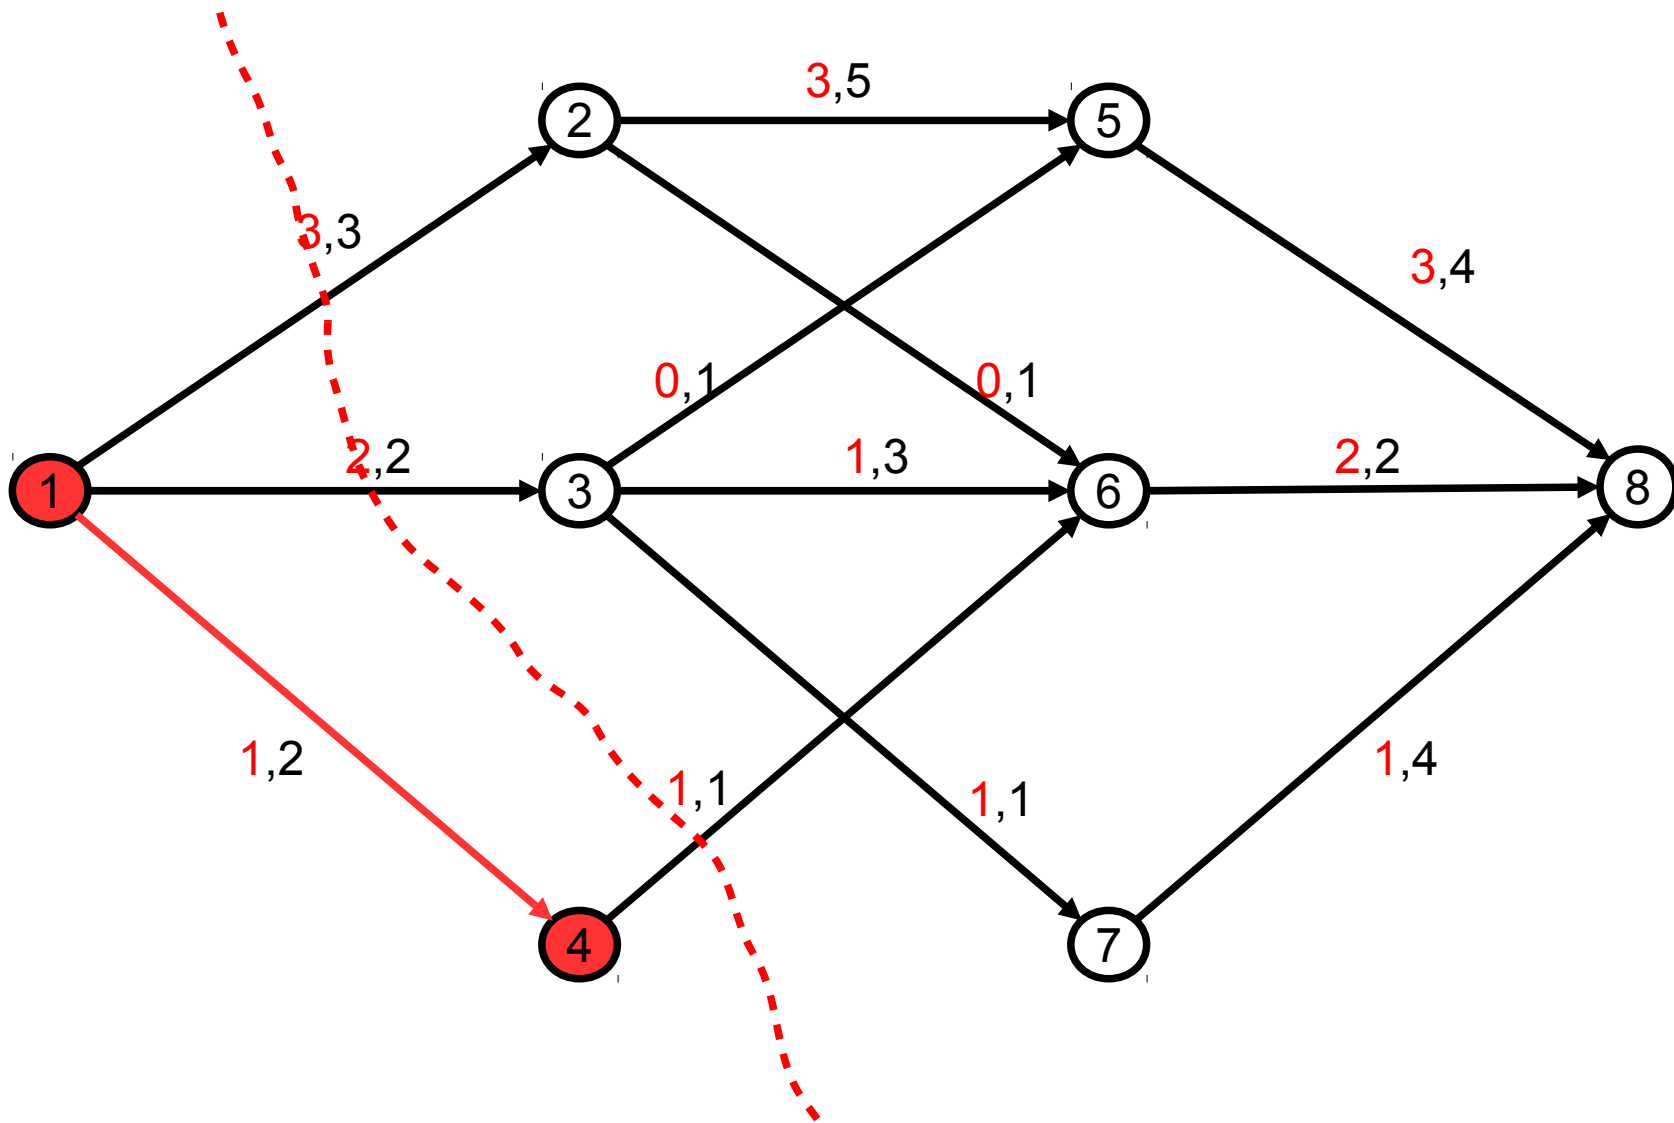

Un collo di bottiglia

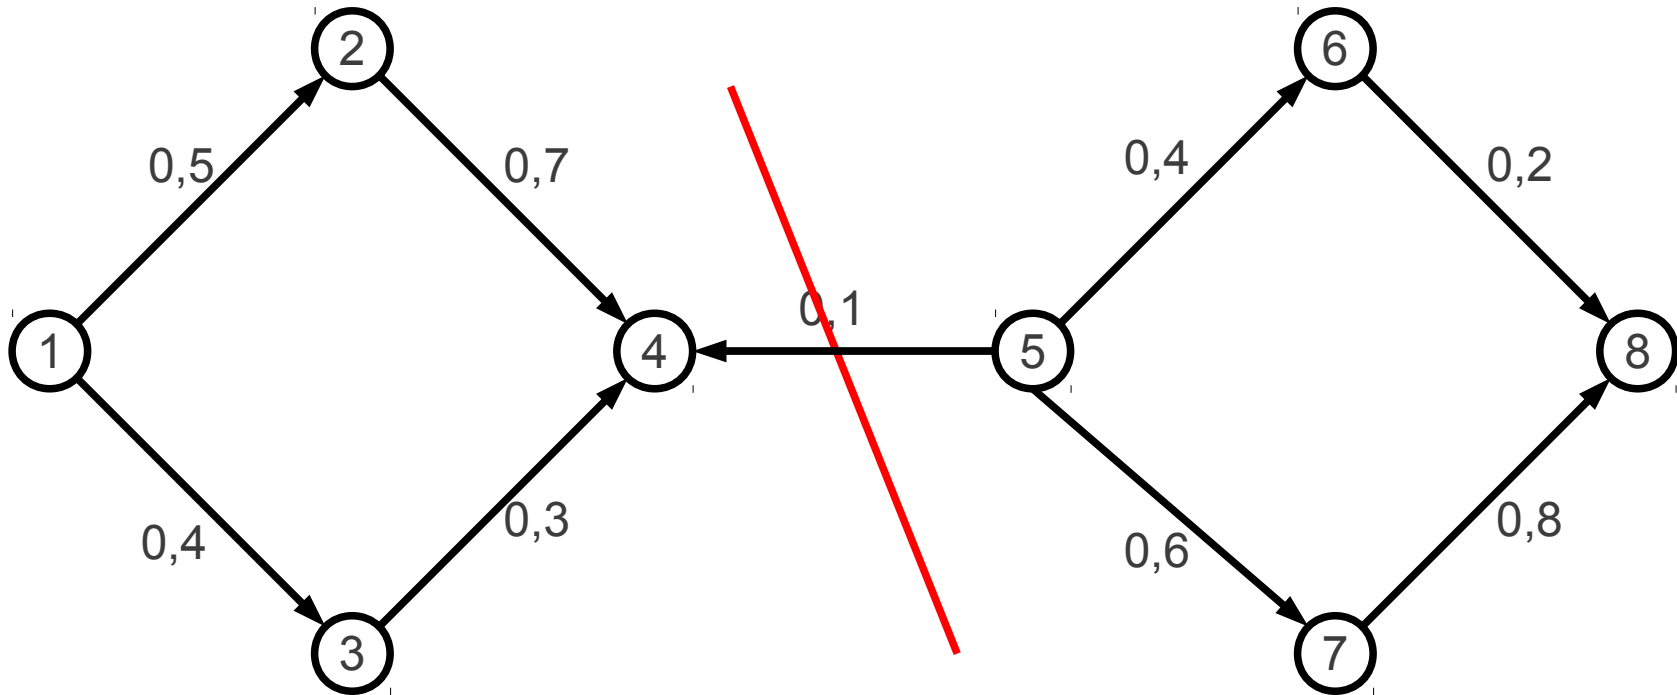

Un flusso certamente massimo

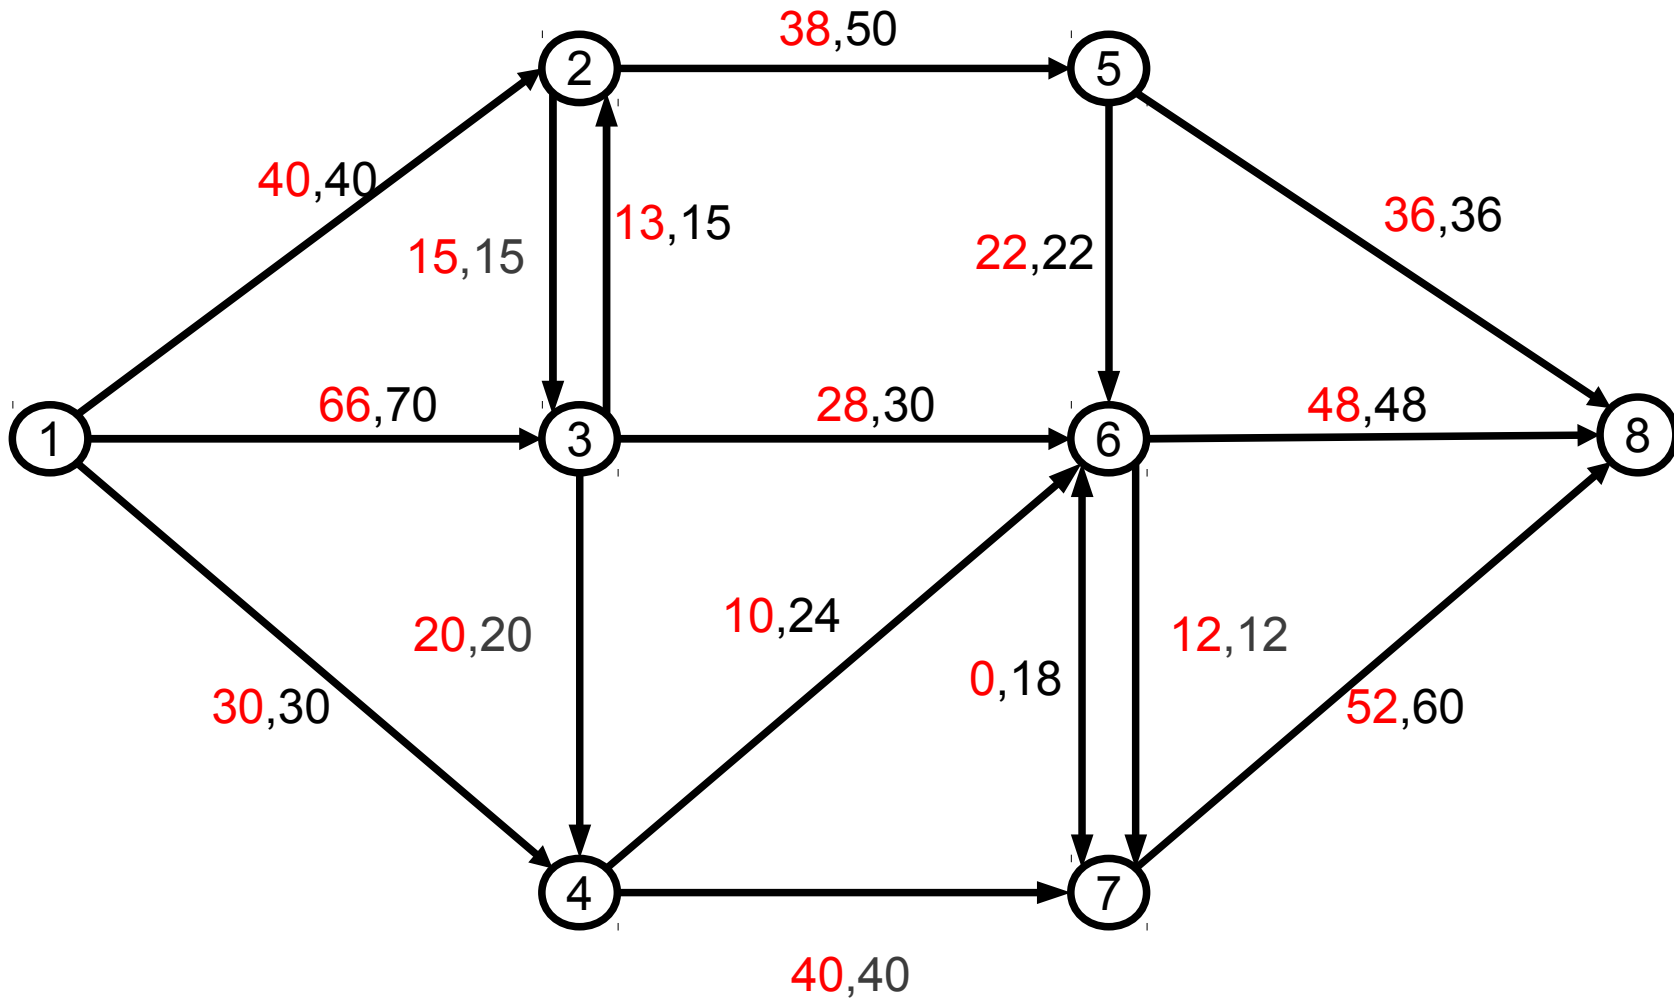

Troviamo il taglio

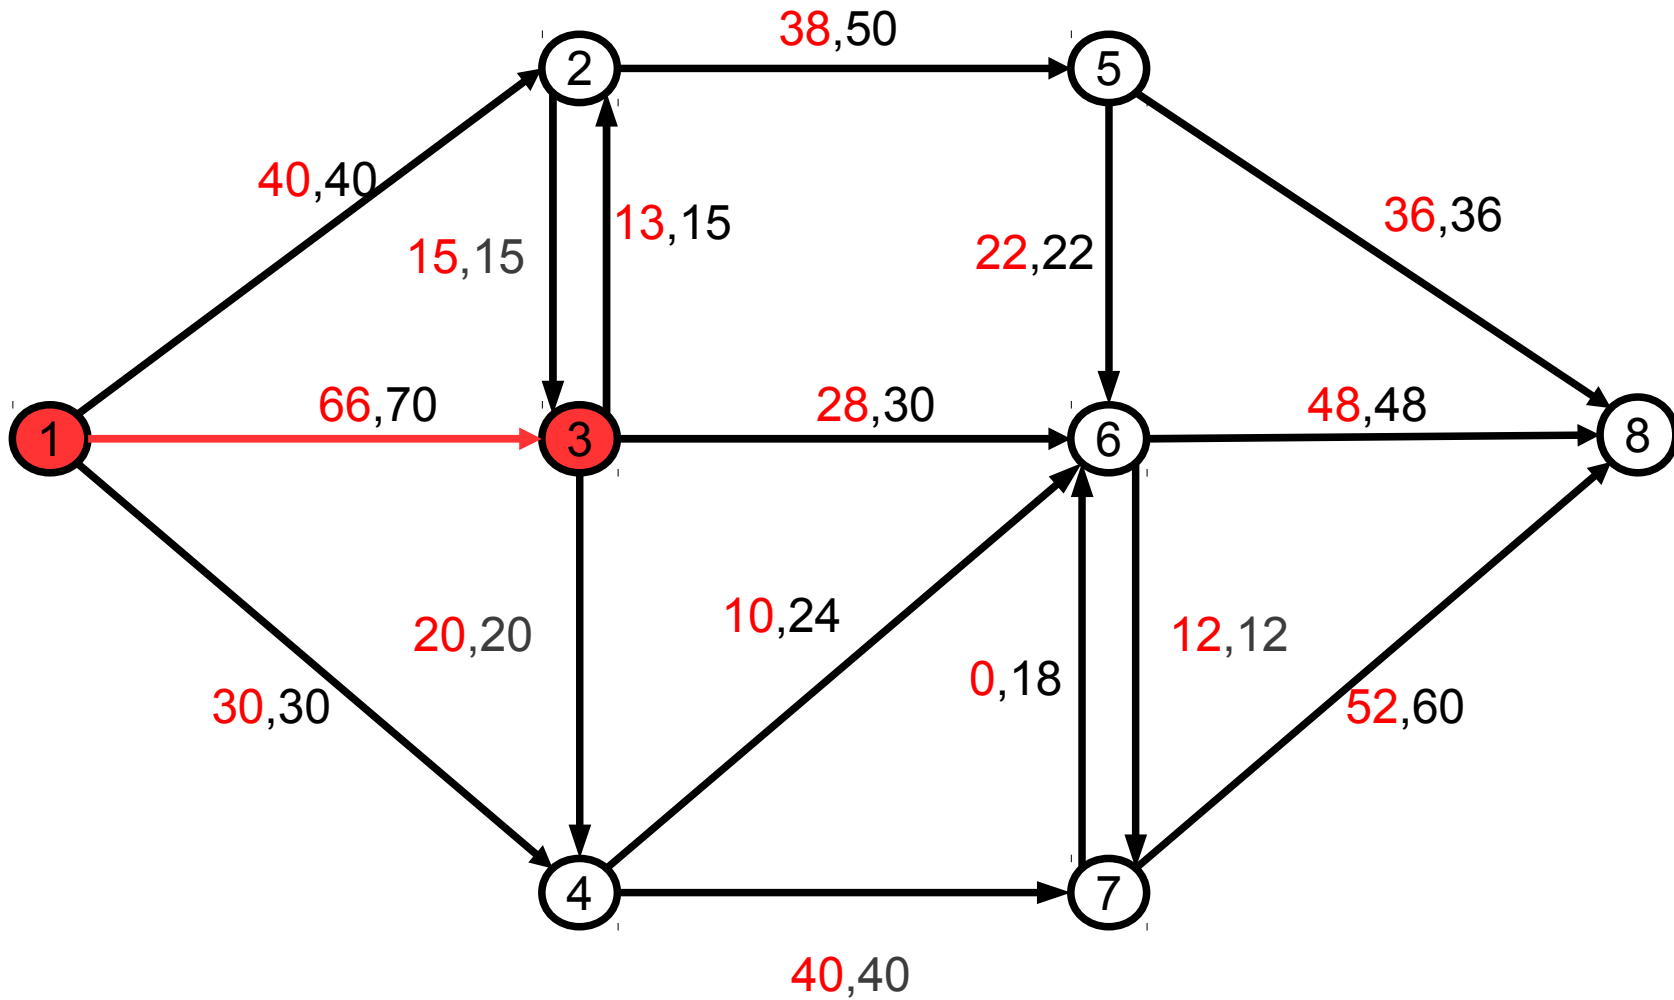

Non passa nulla dal collo di bottiglia

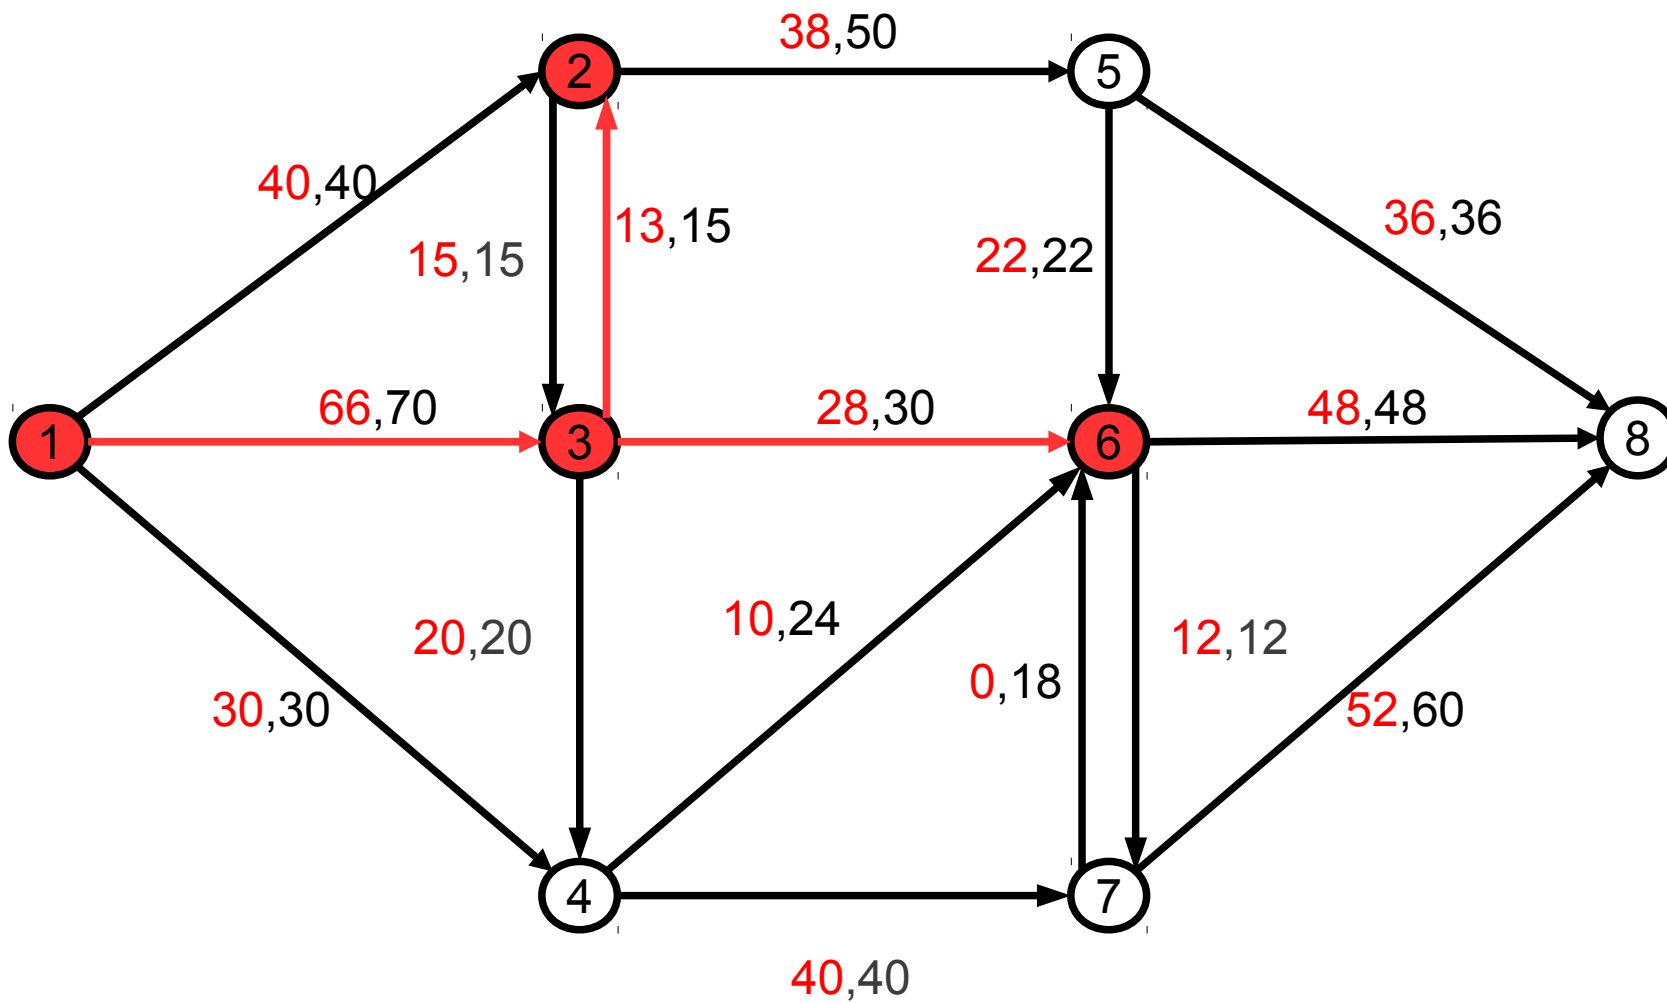

Il flusso è ottimo ?

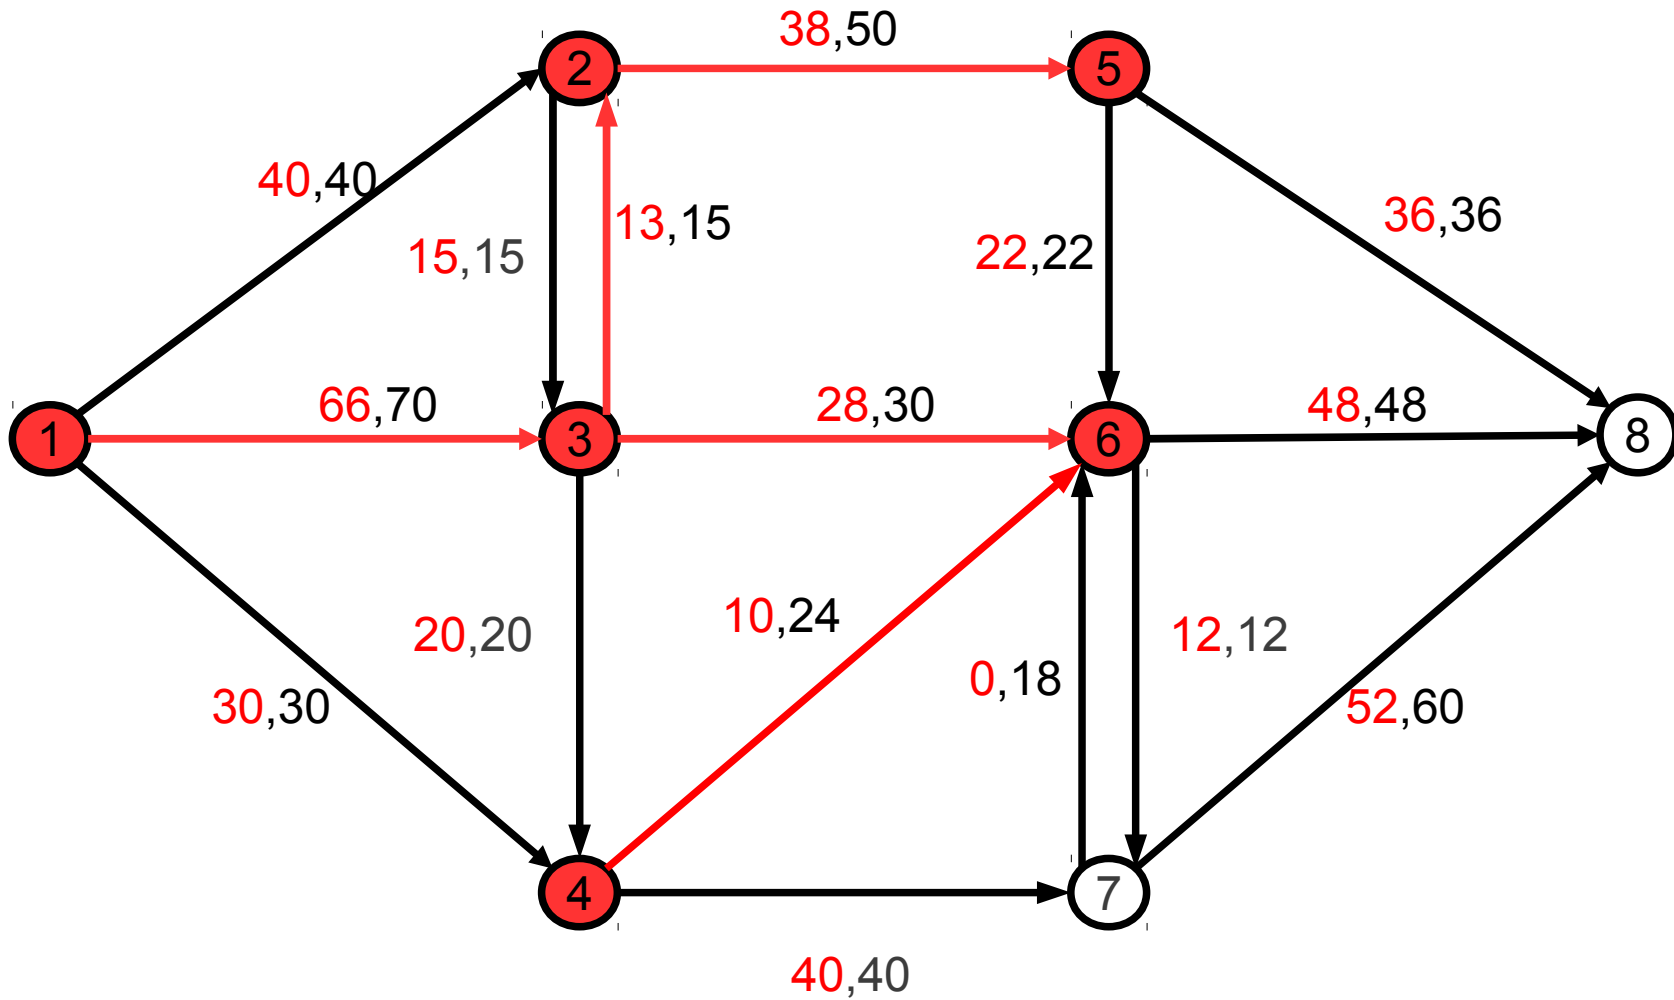

Parto dalla sorgente

Continuo a cercare i cammini aumentanti

Li ho trovati tutti

La capacità del taglio è eguale al valore del flusso
